Netsmart

COVID-19 Mobile Screening Solution

As we begin to make the transition back into the workplace and back into our communities, it is essential provider organizations have the necessary tools to keep their staff, clients and visitors safe. Testing and managing risk will be key components as we move forward together. The Netsmart COVID-19 mobile screening solution is an easy-to-use mobile application that allows users to track and record symptoms of individuals in their environment.

The screening solution is suitable for all healthcare communities and empowers organizations to manage potential risk in their facilities. Along with screening capabilities, the application documents past testing and results available for provider reference through our CarePathways™ Analytics Platform.

Available at no cost for 90 days. A nominal recurring fee will ensue after that period.

Deploy on a smart phone,
tablet or PC

Assess and record
symptoms instantly

Reference
prior testing

Report information to
public health departments
if necessary

Netsmart is delivering a rapid deployment model for the screening solution including the analytics dashboard. For clients who have already deployed KPI dashboards, the new COVID-19 dashboard will be available as a new dropdown view. For new KPI users there will be a quick installation and training to get you up and running. **Reach out to your Client Alignment Executive to get started.**
