KVC Health Systems improves care and reduces cost through speech recognition technology

KVC Health Systems, headquartered in the greater Kansas City area, serves children and families in Kansas, Missouri, Nebraska, Kentucky and West Virginia. Since 1970, KVC has been enriching and enhancing the lives of children impacted by abuse, neglect and trauma. The 1,600-employee organization provides behavioral health, foster care, adoption and inpatient and outpatient services.

**Challenge**

Up until 2016, KVC in Kansas and Missouri used transcription services to complete clinical documentation. This created workflow, reporting and care visibility challenges. Aside from a time-consuming and labor-intensive documentation process, the transcription workflow caused significant delays in care communication. This entire transcription process took up to 48 hours, before clinical documentation appeared in the Netsmart EHR after a client visit. That meant other clinicians also treating the individual couldn’t see valuable information, impacting their ability to provide quality care.

“We knew we needed a solution to do two things: Ease the burden of clinical documentation and integrate with our EHR,” said Shavonda Thrower, KVC Business Relationship Manager. “Also, it needed to be easy to use with minimal training.”

**Solution**

In the spring of 2016, KVC in Kansas and Missouri implemented the M*Modal speech recognition solution to speed their clinical documentation processes.

“This was the easiest implementation we’ve done. After about an hour of training, the team began using it immediately.”

**Results**

Higher clinician satisfaction
Better care
Lower transcription costs
Powerful integration with EHR
Shorter billing cycle

- Longer billing cycle
- Delays in care communication

Solution
- Netsmart Speech Recognition powered by M*Modal

**SUCCESS STORY BEHAVIORAL HEALTH**

This was the easiest implementation we’ve done. After about an hour of training, the team began using it immediately.”
Before M*Modal, it took providers 24 – 48 hours, sometimes more, to complete the documentation process after a client visit. M*Modal cut that time in half. Now, a provider’s notes appear in the Netsmart EHR upon capture, eliminating the delay in information flow and making it readily available to other team members. When a medication or treatment plan changes, it’s vital that everyone treating the person gets the most current information to provide the best possible care.

The use of speech recognition was an integral part of enhancing quality care and lowering transcription costs for KVC. The M*Modal implementation was smooth, simple and fast. “This was the easiest implementation we’ve done,” Thrower said. “After about an hour of training, the team began using it immediately. What’s more, our providers rave about its simplicity; they say it’s as easy as using a remote control.”

“We researched several other products, but none compared to M*Modal,” Thrower added. “M*Modal was the most effective with accuracy because it understands dialects, accents and medical terminology better than any other products on the market. We have a diverse group of providers with different dialects and speaking patterns, and M*Modal was able to capture their narratives correctly.”

“The best part of the speech recognition tool is its powerful integration capabilities with the Netsmart EHR”, Thrower said. “It’s amazing to see how our users leverage all the integration features. They can open forms and access fields through voice commands and create custom templates to meet their individual workflow needs. The integration with the EHR made this possible.”

**Results**

Because providers can capture notes directly into the EHR, the risk of error has decreased, and the level of detail and accuracy of has improved.

Since the implementation of M*Modal, KVC has reduced its costs, improved efficiencies, increased staff satisfaction and provided better services and more quality care to clients.

---

Our providers rave about the simplicity – it’s as easy as using a remote control, they say.”

The Speech Recognition Powered by M*Modal Impact
- Reduced transcription costs by 75 percent
- Improved information flow by 50 percent
- Increased time with clients and decreased time entering notes
- Shortened billing cycle with more complete documentation
- Improved care with detailed, real-time documentation
- Increased clinician satisfaction with easy-to-use software

**About Netsmart**

Netsmart designs, builds and delivers electronic health records (EHRs), solutions and services that are powerful, intuitive and easy-to-use. Our platform provides accurate, up-to-date information that is easily accessible to care team members in behavioral health, care at home, senior living and social services. We make the complex simple and personalized so our clients can concentrate on what they do best: provide services and treatment that support whole-person care.

By leveraging the powerful Netsmart network, care providers can seamlessly and securely integrate information across communities, collaborate on the most effective treatments and improve outcomes for those in their care. Our streamlined systems and personalized workflows put relevant information at the fingertips of users when and where they need it.

For 50 years, Netsmart has been committed to providing a common platform to integrate care. SIMPLE. PERSONAL. POWERFUL.
