

Certify, register and issue records faster

Vital Records System

Netsmart's Vital Records System (VRS) simplifies the entry, validation, registration and issuance of vital event records for both the state and county level. It's a web-based enterprise solution that is easy-to-use and can scale to a virtually unlimited number of users.

Key features

- Tracks births, deaths, marriages/dissolutions, as well as ancillary events such as infant hearing and metabolic screening, termination of pregnancy (TOP) and medical marijuana registry
- Supports point-of-sale transactions for certificates
- Includes a mobile application for physicians
- Supports distributed data collection and certificate printing
- Flexibility to configure certificate formats and printing options
- Supports task-level and field-level security, as well as fax attestation

Twenty percent of state vital records offices use the Netsmart Vital Records System (VRS). VRS also reduces the wait time to certify and register vital records from weeks or months to days.

Key benefits

- Helps the vital records and statistics communities (hospital, funeral homes, state and local record offices) significantly reduce the time for final certification and registration of vital records
- Provides data exchanges between federal, state and local agencies (e.g., NCHS, SSA, CDC, DMV)
- Supports the quick and easy creation of new, client-specific events without customization and programming
