

DEFINING VIRTUAL CARE: How Netsmart Delivers

Virtual Care:

A catch-all term that encompasses the many ways healthcare providers virtually interact with patients.

Virtual Visits

Scheduled interactions between patient and provider via videoconferencing.

Our Telehealth Platform facilitates medical appointments in real time between patient and provider.

Virtual Data Sharing

The secure digital transmission of a patient's medical data.

Our secure EHR allows for confidential record keeping, while permitting providers ease of access to vital patient data.

Telemonitoring

Ongoing, remote patient monitoring using external electronic devices.

CareRecord integrates with wearable devices that monitor patient vitals, alerting staff for vitals capture.

Mobile Health

Apps and other mobile health solutions that enable patients to interact actionably with their health.

myStrength and myHealthPointe apps educate and engage patients in the active maintenance of their overall health.
