

FDA-Cleared Autism Assessment Technology

Diagnose Earlier. Treat Sooner. Measure Outcomes.

Eye-tracking technology using visual attention biomarkers for autism to support early diagnosis and measurable treatment outcomes—starting as young as 16 months.

HOW IT WORKS

Quick and Easy Administration

A trained team member can easily administer the assessment using a portable tablet.

Eye Gaze Capture

Children watch a short video while the device unobtrusively captures eye gaze data.

Instant, Actionable Insights

Generate a detailed report showing the child's scores across three clinically aligned indices: language, cognition, and social engagement.

BENEFITS FOR PROVIDERS

Attract New Patients

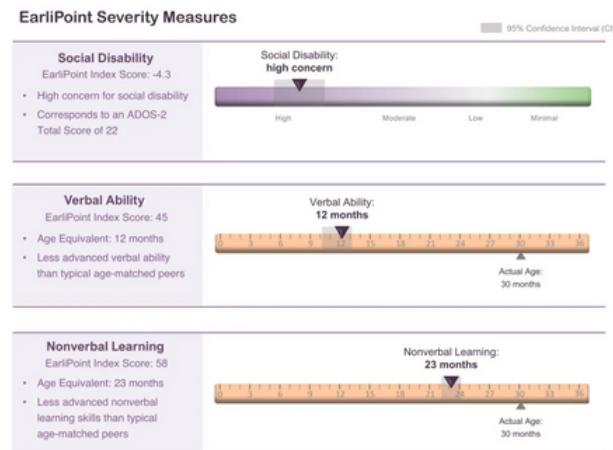

Offer FDA-cleared diagnostics to families—providing early assessment and differentiating your organization.

Track Treatment Effectiveness

Monitor progress with objective, visual-attention-based metrics aligned to gold-standard tools.

Communicate Outcomes with Confidence

Earn the confidence of parents, payors, and educators with objective reports that highlight progress clearly and consistently.
