

Streamline medication management

OrderConnect

OrderConnect™ is an outpatient, web-based electronic prescribing (e-prescribing) and medication management application. It allows providers to prescribe medications electronically, review medication history, order lab tests and receive results. OrderConnect is fully integrated with Netsmart electronic health records (EHRs), and can be used as a stand-alone solution as well.

Key features

- Extensive patient information when prescribing and ordering lab tests, including current medications, medication history, lab results, allergies and diagnoses
- Comprehensive suite of reports, including polypharmacy, dose-range and medication expiration
- Prescription output options include electronic transmission, efax, and print
- Certified by Surescripts to send prescriptions electronically, including controlled substances
- Supports titrations and tapers for prescribing medications in incremental dosages
- Helps meet meaningful use requirements for e-prescribing
- Additional features are available, including Electronic Medication Administration Record (eMAR), inventory management for sample medication and custom formulary management functionalities

Key benefits

OrderConnect digitizes the prescribing process, enhancing accuracy and closing critical security gaps. It improves prescriber efficiency and consumer safety by providing a single location for up-to-date patient information. Here's how:

- Gives clinicians easy access to all pertinent patient information, including current medications, medication history, lab results, allergies and diagnoses
- Helps increase medication adherence
- Reduces time spent communicating with pharmacies
- Helps prevent adverse medication events

The challenge of medication management

- **30%** of paper prescriptions go unfilled
- There are **28,000+ opioid overdoses** per year due to prescription fraud
