

Mobile EHR Access Anytime, Anywhere

CarePOV Clinician is a mobile solution that gives clinicians and case managers in the field access to client records when Wi-Fi access is inconsistent or unavailable. Using a Windows®-based tablet or laptop, information and notes captured in the field are stored and then synchronized with the electronic health record (EHR) upon connection.

Features

- Provides clinicians with secure access to client data while in the field
- Information entered in the field automatically sync with the EHR when checking back in
- Users can view demographics, treatment plans and progress notes from a single screen
- Provides access to forms and tools remotely, even those that have been customized
- Eliminates the need for an external signature device

Benefits

- Fast implementation delivers significant value to your organization with minimal effort
- No internet access is required in the field; data syncs with the EHR when reconnected
- Improves security by encrypting data and eliminating the need to transport paper charts and files
- Tight integration with the EHR means users can only access data they are authorized to see

Expand the Reach of Your Organization

As the trend toward consumer-centered care continues, your organization needs the ability to provide services effectively and efficiently in the field. CarePOV Clinician extends the functionality of your EHR and makes it easier to offer options for care that are convenient for consumers.

The solution also eases the burden of field services on your staff by eliminating the need to transport paper charts or re-enter notes and documentation captured offline.

- Access to client charts wherever services are provided
- Ability to update client information contained in modeled forms and/or assessments, offline
- Synchronizes with EHR upon connectivity, increasing accuracy and timeliness of documentation
- Intuitive workflow boosts staff efficiency and satisfaction
- Increases access and convenience to services for consumers
