

## AllDocs ECM Solution

Netsmart Homecare's AllDocs allows for patient-based information to be electronically available to home care and hospice agencies.

### FOCUS YOUR TIME ON PATIENT CARE

By converting paper documents to images, physical storage costs are reduced, documents can be electronically utilized and shared, and information is retrieved faster. These efficiencies translate to more time available to focus on patient care and clinical documentation, rather than on gathering, transporting and tracking paperwork. Clinicians utilizing AllDocs can access documents that have been scanned and imported from within Netsmart Homecare with a click of a button. At the point of care, field workers synch documents onto the laptop, view, edit and annotate information, and synch documents back to a central database. Other documents including forms and images – such as wound photos – can be easily uploaded.

Clients across the country utilize Netsmart Homecare's AllDocs solution and value their ability to:

#### Reduce Physical Storage Costs

- Allow agencies to be truly paperless
- Achieve information consistency by eliminating hybrid records formerly half-electronic and half-paper

#### Share and Utilize Electronic Documents

- Save staff time
- Reduce barriers to patient information
- Eliminate data entry mistakes
- Improve clinical decision-making with more, relevant information readily available at the point of care
- Eliminate time and mileage otherwise required by clinicians in the field to submit paperwork and images in person

#### Quickly Retrieve Information

- Remove multiple logins
- Improve productivity by keeping field staff focused on core job functions with the ability to promptly process clinical data
- Create opportunity for the home care organization to see more patients

### Industry Needs:

- Reduce physical storage costs
- Quicken the retrieval of information

### Key Benefits:

- Reduces physical storage costs
- Enables quick sharing and utilization of electronic documents
- Speeds the retrieval of information

### Key Features:

- Provides a single, unified patient view of electronic documents across all agency users
- Removes multiple logins with the ease of one-button access to document, e-form and image creation
