

# AllDocs Homecare Content Management

AllDocs Homecare™ provides users with electronic access to the documents they require, eliminating the need for paper. Electronic forms can be automatically pre-populated with patient information, leveraging the integration with Netsmart. The forms are also automatically associated with complementary information, such as wound photos, documents or any other captured content within the patient's chart.

## EMPOWER INFORMED CARE

Hyland's partnership with Netsmart creates an API-level integration, ensuring immediate access to content. HL7 integration eliminates the need for dual entry of information. These efficiencies translate to more time available to focus on patient care and clinical documentation, rather than on gathering, transporting and tracking paperwork.

AllDocs Homecare provides you with the tools you need to deliver more effective, more informed care – within and beyond the four walls of your agency.

## Key Features

- Access all necessary documents while in the field
- Associate content with patient record automatically for reduced errors
- Automate approval processes and notifications
- Empower remote clinicians through e-forms and signatures at the point of care

## Key Benefits

- Provides a single, unified view of electronic documents across all agency users
- Reduces or eliminates physical storage costs
- Saves staff time
- Reduces barriers to patient information
- Eliminates data entry mistakes
- Improves clinical decision-making with relevant, actionable information readily available at the point of care
- Eliminates time and mileage otherwise required by clinicians in the field to submit paperwork and images in person
