

Inpatient Psychiatric Solution

The Netsmart inpatient psychiatric solution is built on an ONC-certified electronic health record (EHR) specifically designed for behavioral health. It offers a robust set of workflows that supports a multi-disciplinary approach to driving outcomes, increases efficiencies through embedded evidence-based practice, promotes smooth transitions of care leveraging interoperability standards and delivers a proven closed-loop medication management process.

Key Features

Clinical

- Supports creation of multi-disciplinary individualized treatment plans
- Role-based dashboards allow clinicians to provide services and manage consumer care more efficiently
- Actionable, task-based workflow automation developed for inpatient behavioral health
- Manages automated orders for all order types including labs, diet and medications

Medication Management

- Computerized physician order entry (CPOE) reduces errors and speeds up processing
- Alerts on premise pharmacist of drug and allergy interactions, and provides patient-specific dosing recommendations
- Incorporates automated dispensing machines (ADM) and electronic medication administration records (eMAR)
- Supports inventory management and cost accounting, as well as accurate billing and cost control
- Accommodates both on- and off-premise pharmacies

From Intake Through Treatment to Discharge ... and Beyond

Intake: Streamline the admission and discharge processes with point-to-point referrals with outside organizations

Assessment and Planning: Develop individualized treatment plans based on standard or customized clinical assessments

Treatment Delivery: Enhance care delivery with actionable, task-based workflows specifically designed for behavioral health

Quality Measures: Real-time performance dashboard tracks progress toward clinical, financial and operational goals

Discharge/Transition of Care: Simplify information sharing and engage patients in their care to improve outcomes

Technology Designed for Inpatient Psychiatric Facilities

Inpatient solutions for ...

- Private and public psychiatric hospitals
- Organizations offering both inpatient and outpatient care
- Organizations providing residential or partial inpatient treatment

Improve Transitions of Care

Netsmart inpatient solution simplifies information sharing between the inpatient facility and external organizations, resulting in more efficient admissions to inpatient care, efficient referrals and smooth transitions to outpatient treatment.

- Exchange information with acute care providers to move patients to appropriate facilities quickly
- Streamline admission and discharge processes using electronic referrals from and to outside organizations
- Reduce costs and improve safety by minimizing redundant or unnecessary treatment during the transitions of care

Engage Individuals for Better Outcomes

Through a user-friendly, secure portal, our inpatient solution can help your organization stay connected to clients as they progress through follow-up care.

Clients can:

- Download discharge summaries to share with community providers
- Complete paperwork prior to admission and update demographic and health information
- Access client education materials post-discharge

Care providers can:

- Push information and admission forms directly to clients
- Use secure messaging to improve pre-admission and post-discharge communication with clients
- Reduce manual data entry of information, initial assessments and other forms

Measure and Report on Quality

Our inpatient solution offers the ability to evaluate performance against organizational goals, state mandates, federal regulations or national benchmarks.

- Performance dashboard with views for clinical, financial and operational data
- No programming necessary – drag-and-drop interfaces create custom data visualizations
- Evaluate standard and custom metrics over time
