

## myInsight: Just for Public Health™

myInsight powered by myEvolv™ is a web-based electronic health record (EHR) solution developed specifically for public health agencies. It offers integrated clinical and finance management features for public health clinics, as well as support for immunization, family planning (Title X reporting), STD/HIV, tuberculosis, health promotion, adult health and child health programs.

### Key Features

#### Clinical and case management

- Public Health Informatics Institute recommended workflow
- Confidentiality set at agency, program and encounter level
- Summary tabs for lab orders and results, medications, immunizations and vitals
- Supports structured taxonomies such as targeted case management (TCM) and the Omaha System

#### Operational

- Exchange data securely with HIEs, state registries and other providers
- Create standard reports from built-in formats or customize using the report wizard
- Integrated inventory management for medications, immunizations and supplies
- Track results and effectiveness by individual, staff member, program and agency

#### Financial

- Works with the general ledger accounting system to serve as an accounts receivable/accounts payable sub-ledger
- Supports sliding fee scales and multiple claim formats, including HCFA 1500 and 837 I/P
- Supports the complex billing requirements of state Medicaid

Netsmart Public Health solutions and services are used by more than 250 health and human service departments at both state and local levels throughout the U.S.

### Technology Designed for Public Health

- Clinical support for mental health services, addiction treatment, immunizations, wellness and other programs
- Financial features to manage complex claims and maintain operations
- Configurable reporting features and HIPAA-compliant data exchange with labs, HIEs, other agencies and partners
