Health Homes of Upstate New York (HHUNY) brings together four organizations that serve as regional hubs for 22 counties. “Health homes” are state-run Medicaid plans that coordinate care for enrollees with chronic conditions, including mental illness, substance use disorders, asthma, diabetes and heart disease.

The four organizations in HHUNY are Chautauqua County Department of Mental Hygiene (HHUNY Southern Tier), Lake Shore Behavioral Health (HHUNY Western), Huther Doyle (HHUNY Finger Lakes) and Onondaga Case Management Services (HHUNY Central). Together they support the care management work of 60 community-based agencies.

“Health homes” are state-run Medicaid plans that coordinate care for enrollees with chronic conditions, including mental illness, substance use disorders, asthma, diabetes and heart disease.

“The intention is that health homes will greatly improve outcomes for individuals involved and, as a result, will save tremendous amounts of healthcare dollars for citizens of the state,” said Adele Gorges, executive director of New York Care Coordination Program (NYCCP), the not-for-profit organization that created HHUNY. NYCCP is authorized by the State of New York to provide health homes for western New York.

Making the connection with multiple EHRs
To facilitate the exchange of authorized clinical information between providers using different electronic health records (EHRs), HHUNY uses Netsmart’s CareManager. This solution aggregates clinical data to provide a broad picture at the population level, facilitates the exchange of authorized health information among providers, tracks clinical quality measures and outcomes, and manages authorizations and claims across care providers.

Care coordinators use CareManager when performing outreach and care management activities, and for management of the enterprise. If a person needs housing, transportation or employment services, the service plan will also address those needs.

“We look at the whole person as opposed to doing care management in more limited silos,” says Gorges. “CareManager is the healthcare IT vehicle that gets it all done.”

Reducing ED visits and hospital stays
CareManager is working well for HHUNY, and Gorges says it is easy for care managers to use. She noted that a health home system is only as good as the communication among providers, and that a care management solution like CareManager is necessary to optimize health home performance. “We like the solution; we like its potential,” said Gorges.

Indications are that the health home model is reducing emergency department visits and hospital stays for those participating, said Gorges, citing data released by the State of New York.

Gorges is optimistic about the future of HHUNY, which will have as many as 35,000 individuals enrolled at any one time. The goal is to discharge clients from the health home program after six months to three years of support, allowing the client to manage his or her own care. Then, she says, “Everyone benefits.”

“The intention is that health homes will greatly improve outcomes for individuals involved and, as a result, will save tremendous amounts of healthcare dollars for citizens of the state,” said Adele Gorges, executive director of New York Care Coordination Program (NYCCP), the not-for-profit organization that created HHUNY.
